

Sliding Door Bottom Rolling

Designed to meet the everyday rigors of the New Zealand built environment, the 12051 range of sliding hardware will perform effortlessly year in and year out.

Design Features

A low profile tack, has made the system safer and keeps a clean sight line.

Engineered plastic tyres coupled with anodized aluminium track makes for smooth and quiet operation.

Materials

Our plastic bottom roller is made from high strength acetal. This material was chosen for its excellent strength properties, as well as being extremely corrosion and water resistant. Our products are built with durability in mind, and will stand the test of time.

Testing

Thorough design and manufacturing controls, mean nothing without proof it will perform in the real world.

All of the Zebratti range have passed rigorous cycle and load testing, that simulate real world conditions, to ensure your doors will move long into the future.
